

# Change the present. Connect your delight

Complying with global standards, Liberty Himawari was developed to improve the work environment and the quality of excretory care.

Developed to improve the work environment and the quality of excretory care, its highly secured functionalities reduce the burden of caregivers and protecting the dignity of the care receivers.

Sensors detect the user's urination or defecation and automatically start to operate.

## 【Excretion Sensor System】

The built-in sensors in the cup unit detect the urination and defecation and then automatically start operating the apparatus. This relieves caregivers by reducing their stress at night and gives them more free time in daily life.

Cup unit

Using a special silicone close to human skin touch

## 【Special Silicone】

The cup unit uses a special silicone that excels in adhesiveness, volatility and safety. The material used for the artificial breast is harmless to human body with extended usage... hardly causes urine or water leakage.

Separation of air, excretion and water by stable suction power

## 【Excretion Tank / Separator】

Stabilized suction power during high-speed rotation completely separates air from solid and liquid waste, preventing the clogging of excreta.

## ◎Attachment of the cup unit

Connect the cup unit to the hose.  
Lay the cover under the body,  
attach the cup unit and stabilize  
it with the cover sheet.

## 【Specifications of Himawari's Main Unit】

- Voltage and frequency: 100V (Overseas 220V) 50/60Hz
- Power consumption: 1000W
- Capacity of water tank: 4liters
- Capacity of excretion tank: 5liters
- Dimensions of main unit: 620mm (L) x 452mm (W) x 485mm (H)
- Weight of main unit: Approximately 20kg
- Length of power cord: 3m (Detachable type)
